Fields of force (Silové pole) - 1906

- [Knina \(pdf +](#)
) kopie

Popisuje proudění tekutin a jejich porovnání s elektromagnetismem včetně doprovodných ověřovacích pokusů.

Cituje Maxwella, který si byl vědom neúplnosti popisu elektromagnetismu:

It must be carefully born in mind that we have only made one step in the theory of the action of the medium. We have supposed it to be in a state of stress but have not in any way accounted for this stress, or explained how it is maintained ...
I have not been able to make the next step, namely, to account by mechanical considerations for these stresses in the dielectric.
